A Gentle Introduction to R

Jonathan Whiteley

2023-08-11

Prerequisites

- Access to a copy of the \mathbb{R}^1 software
 - ▶ i.e., a "binary executable"
 - ► Go to www.r-project.org to get a copy, or ask your system administrator.
- No previous experience with R or programming required.

¹The R logo (♠) is © 2016 The R Foundation and used as-is under the terms of the CC-BY-SA 4.0 license

Pop Quiz

We will review these at the end, so you can see how much you have learned.

- What does 'CRAN' stand for?
- Why is it named 'R'?
- How can you use R interactively?
- How do you find out what a function does & how to use it?
- How do you store values to re-use later?
- True or False: Warnings can be ignored, but an Error means I made a mistake.
- True or False: Error messages will tell me how to fix the problem.

Answer in the chat:

What emoji best describes your current mood or state of mind?

Introductions

- Name
- Pronouns
- Job title, role
- optional: a hobby or activity you enjoy?
- Have you used R before?
- Have you used a programming language before?

Icebreaker activity

What is this?

1–3 word description, for example:

- "This is grey"
- "This looks uncomfortable"

OR caption this image?

On your turn:

- Previous person's name
- 2 Their answer to the question
- Your name
- 4 Your answer
- 5 Name of the person to go next

Figure 1: Caption this image.

Learning Objectives

- Get familiar with the R interface
- Use technical terms for R concepts
- Enter commands
 - use R interactively: understand input & output
 - use some common functions
- Get familiar with 'R objects'
 - store & retrieve values
- Understand Errors, Warnings, and Messages
- How to get Help

Why is it named 'R'?

- R started as an open-source implementation of the S statistical computing language (S-PLUS)²
 - ▶ S was created at Bell Laboratories in 1976³
 - R was based on the S syntax (mostly v3), but works very differently "under the hood".
- R was created by Ross Ihaka and Robert Gentleman aka "R & R"⁴
 at the University of Aukland in the early 1990s.

 $^{^{5}}$ https://en.wikipedia.org/wiki/R_(programming_language)#History

The R Interface

- 'base R' has a slightly different interface for each Operating System (OS)
 - ► GUI = Graphical User Interface
- R can also run inside of a terminal (no GUI) or other software (different GUI).

Integrated **D**evelopment **E**nvironment (IDE)

- An IDE is like an extra interface layer on top of 'base R'
- IDEs often add convenient tools to make writing code easier (e.g., syntax highlighting), and for developing larger projects with multiple files.
- **RStudio** is one of the most popular cross-platform IDEs for R.
 - RStudio is available in open source (free/libre) and commercial^a editions.

^afor organizations not able to use software licensed with AGPL

A quick tour of the 'base R GUI'

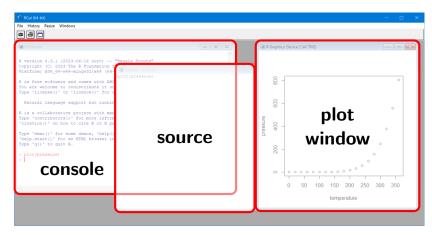

Figure 2: Screenshot of the R GUI in Windows.

A quick tour of RStudio

The RStudio GUI has 4 'panes' that contain 'tabs'.

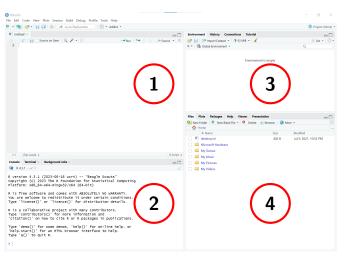

Figure 3: Screenshot of RStudio (default layout).

left:

- 1 top: Source^a
- 2 bottom:
 Console,
 Terminal,

right:

- 3 top: Environment, History, . . .
- bottom:
 Files, Plots,
 Help, . . .

^aempty until you create or open a file

Interacting with **R**

- Regardless of the GUI, you interact with R primarily using a command line
 - aka a command line interface (cli)
 - the command line is usually in the console
- "Question-and-Answer Model"
 - You ask R to do something (a command), and R tells you the answer (result).
- Instructions are given to R using the R language.

The *console* is a window or pane where you will find:

- The command line
 - where you will enter commands for R to run
- Results of commands and other output
- Messages, Warnings, and Errors

The R command-line

The command prompt normally looks like this:

>

(the colour varies depending on the interface)

- ▶ This is R's way of saying "I am ready to accept new commands".
- ► Type a new command on the line after this prompt (i.e., input).
- Press return/enter to run the current command
- If you can still edit the command next to the prompt, then it has not been submitted to R to execute (it is still waiting for input).
- If the last prompt is not empty (i.e., there is text beside it)
 and you cannot edit what is beside the prompt,
 it means R is still running the last command and is not ready to
 accept a new command yet.
 - Wait for a new empty prompt to appear before entering the next command.

The R command-line (continued)

If the prompt looks like this:

+

it means the last command was incomplete and R is waiting for more input.

R will not do anything until the command is completed or cancelled.

- This usually means you forgot a closing quote ", parenthesis (, bracket [, or brace {
- You can cancel the current command at any time by pressing escape (esc)

Input & Output

In this presentation,

commands that can be entered in the command-line look like this:

```
Input (commands)
```

- ▶ You can try these yourself!
- Expected output (results) look like this:

Output (results)

Read the opening message carefully.

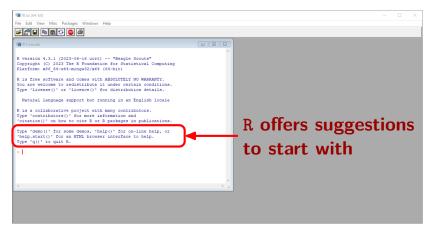

Figure 4: R offers suggestions of commands to Type in the console when it starts.

demo(graphics)	 some plots and graphs that can be made with R
demo(image)	 image-like graphics and maps that can be produced with R
demo(lm.glm)	 a demonstration of linear modelling & GLMs
demo()	a list of available demos
help.start()	← A great place to start

← A great place to start, especially if you are comfortable reading documentation for a programming language. More on this later.

Note

R will not only show the output, but also the code used to produce it.

R is a show-off (alt)

demo(graphics)
demo(image)
demo(lm.glm)
demo()
help.start()

 some plots and graphs that can be made with R

- image-like graphics and maps that can be made with R
- a demonstration of linear modelling & GLMs
- a list of available demos

A great place to start, especially if you are comfortable reading documentation for a programming language. More on this later.

Note

R will not only show the output, but also the code used to produce it.

R is a calculator

1 + 1	10 - 1
[1] 2	[1] 9
2 * 2	8 / 2
[1] 4	[1] 4
2 ^ 3	sqrt(9)
[1] 8	[1] 3

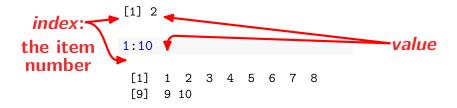

- These are expressions
- Expressions are evaluated, and the value (result) is returned (sometimes invisibly)

- With the cursor next to the empty prompt (>), use the up & down arrow keys (↑↓) to re-produce previous commands.
- This lets you "scroll through your command history".
- Press up ([†]) once, and you get the last command you entered without having to copy & paste.

Vectors

- The most basic kind of object in R is a vector
- Think of a vector as a list of related values (data), which are all the same type
- A single value is an "atomic vector" (a vector with a length of 1)

Vectors

- Vectors can be used in calculations
- Operations are applied to each item (element-wise)

```
sum( c(1, 2, 3, 4, 5) )
1:10 + 2
1:5 * 5:1
```

Vectors can be used to plot data in a graph

```
plot( rnorm(1000) )
hist( rnorm(1000) )
```

Some data types (of atomic vectors)

numeric

- Includes integers, real (decimal / double), and complex numbers.
- 1.23

character (string)

- in single ' or double " quotes.
- 'hello world'
- "1.23"

logical

TRUE or FALSE

```
class(1.23)
class('hello')
class("1.23")
class(FALSE)
typeof(1.23)
typeof(1:10)
as.character(c(1,2,NA,4))
as.*(): converting from one
type to another = coercion
```

Symbolic variables

• You can store values (*objects*) in symbolic variables (*names*) using an assignment operator:

```
assign the value on the right to the name on the left
```

Names can include:

```
letters a-z A-Z numbers 0-9 periods . underscores _
```

```
A <- 10
B <- 10 * 10
A_log <- log(A)
B.seq <- 1:B
assign('x', 3)
```

 Names should begin with a letter.

Retrieve values

When a variable name is evaluated, it returns the stored value.

A							В							
[1] 10						[1] 100								
A_log						x								
[1] 2.302505						[1	[1] 3							
B.seq														
[1]	1	2	3	4	5	6	7	8	9	10	11	12	13	
[14] [27]	14 27	15 28	16 29	17 30	18 31	19 32	20 33	21 34	22 35	23 36	24 37	25 38	26 39	
[40]	40	41	42	43	44	45	46	47	48	49	50	51	52	
[53]	53	54	55	56	57	58	59	60	61	62	63	64	65	
[66]	66	67	68	69	70	71	72	73	74	75	76	77	78	
[79]	79	80	81	82	83	84	85	86	87	88	89	90	91	

Built-in variables

Some words and letters already have values in R and should **never be used as variable names**.

pi version

[1] 3.141593 \dots information about this version of R \dots

letters

[1] "a" "b" "c" "d" "e" "f" "g" "h" "i" "j" "k" "l" "m" "n" [15] "o" "p" "q" "r" "s" "t" "u" "v" "w" "x" "y" "z"

LETTERS

[1] "A" "B" "C" "D" "E" "F" "G" "H" "I" "J" "K" "L" "M" "N" [15] "O" "P" "Q" "R" "S" "T" "U" "V" "W" "X" "Y" "Z"

Reserved words

Some words and letters already have special meaning in the R language (*keywords*) and should **never be used as variable names**.

NA	"Not Available"	placeholder for unknown or missing values
NaN	"Not a Number"	placeholder for <i>undefined</i> numeric values
NULL	a special object	placeholder for missing objects
Inf	Infiniti	
TRUE	Logical value	
FALSE	Logical value	
T	short for TRUE	
F	short for FALSE	
c,q,t,C,D,I	R functions	
diff, df, pt	R functions
